Abstract This study investigated the relationship between personality traits and the type of leadership among the chief executive officers (CEOs) in Hong Kong using a questionnaire survey method. The data were collected from all the CEOs of selected companies listed on the Hong Kong Stock Exchange during 2002–2009. We used a multivariate analysis of variance to test the differences in the personality traits and leadership style of CEOs and to explore the factors influencing leadership style. The study found that there was a significant difference between CEOs' personality traits and leadership style. The differences between the personality traits of CEOs and leaders were identified in five factors: openness to experience, extraversion, agreeableness, conscientiousness and emotional stability. This study further showed that the leadership style of CEOs had changed as the number of years on the board had increased. The results of the study suggest that the CEOs' personality traits and leadership style will influence the company's performance.

Australia did not play any home matches in the Oceania sub-continent between 1955 and 1971, but since 1973, the ACB has toured Oceania on a regular basis. Oceania was a full member of the International Cricket Council (ICC) from 1993 to 2001, and is now a member of the ICC East Asia-Pacific (EAP) group. In September 2019, Oceania was suspended from the ICC due to the coronavirus pandemic.
